

Smart Fit Energy

- ▶ Responsive cushioning delivers energy return for dynamic movement
- ▶ Dynamic arch support promotes stability and natural alignment
- ▶ Firmer midfoot enhances control, power, and performance

Energy is a performance inspired premoulded insole designed for active movement, walking, and running.

The insole combines responsive cushioning with energy return to support a more dynamic and propulsive step.

The dynamic arch support provides controlled stability during movement, while the firmer midfoot structure enhances power transfer and foot control, especially during faster paced activities and directional changes.
